

Earthquake Hazard Analysis Report

SUBJECT PROPERTY:

782 Steiner St
San Francisco, CA 94117

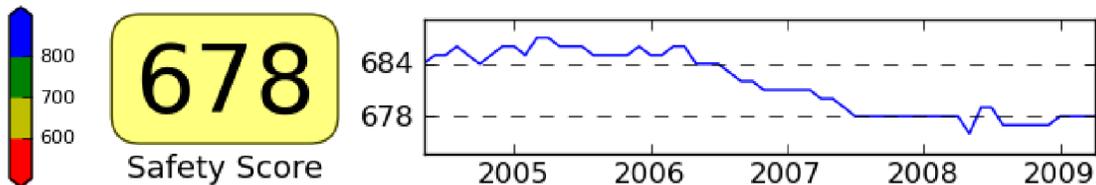

OpenHazards Group (“OpenHazards”) engages in extensive research to compile the information available in connection with the Earthquake Hazard Analysis Report, publications, and web site (www.OpenHazards.com). (Collectively, the publications and web site are referred to as the “reports”.) The reports are based upon information supplied by homeowners. The specific methodologies used by OpenHazards are discussed on the website. OpenHazards makes no predictions or guarantees regarding the availability, ability, or willingness of a service provider to provide services. The reports are provided “as is,” and all warranties, representations, or endorsements, express or implied, oral or written, with regard to the reports, including, without limitation, any warranties of merchantability or fitness for a particular purpose, are expressly disclaimed by OpenHazards. You agree OpenHazards is not responsible for any direct, indirect, incidental, special, punitive, consequential, or any other damages that may result in any way from your use of or inability to use the reports. All statements concerning insurance, licenses, etc., are informational only and are historical as of September 10, 2010. Since insurance and licenses can expire and can be canceled, homeowners should always check such information for themselves. For other helpful tips for selection of service providers, please refer to the Mitigation section of the report. Your use of the information available in any of the OpenHazards publications in which this disclaimer appears shall constitute your acceptance of these terms. Please feel free to contact OpenHazards with any questions regarding this disclaimer or the reports.

Property Synopsis

Property Address: 782 Steiner St, San Francisco, CA 94117
Declared Value: \$1,025,000
Hazard Discounted Value: \$970,979

Residence: Single Family
Year Built: 1980
Stories: 2
House Size: 2480 sq. ft.
Construction: Wood Frame
Soil Type: Hard Rock

This property has a Safety Score of 678 indicating it is at moderate risk of structural damage over the coming years. Earthquake insurance might be appropriate. Note that this calculation is based on home descriptions you supplied. OpenHazards does not verify the accuracy of the home details.

| | Within 1 Year | Within 5 Years | Within 10 Years | Within 30 Years |
|---|---------------|----------------|-----------------|-----------------|
| At Least \$6,150 Loss (1% Damage) | 0.59% Chance | 2.94% Chance | 5.79% Chance | 16.38% Chance |
| At Least \$30,750 Loss (5% Damage) | 0.13% Chance | 0.64% Chance | 1.27% Chance | 3.77% Chance |
| At Least \$61,500 Loss (10% Damage) | 0.03% Chance | 0.14% Chance | 0.28% Chance | 0.83% Chance |
| At Least \$92,250 Loss (15% Damage) | <0.01% Chance | 0.02% Chance | 0.04% Chance | 0.13% Chance |
| At Least \$123,000 Loss (20% Damage) | <0.01% Chance | <0.01% Chance | <0.01% Chance | <0.01% Chance |

This table indicates the likelihood of damage and financial loss within a future time interval. The vertical columns designate the time interval from today, and the horizontal rows designate the ranges of loss. The 15% Damage threshold indicates the typical deductible for residential earthquake insurance.

1 Introduction

Whether you own, plan to buy, or rent property, you need the best advice possible about the financial and personal risks you might face. OpenHazards offers the only openly accessible tool to help you answer questions you may have about earthquake hazards in your area.

Welcome to the world of seismic safety.

What are the chances your home, condominium or apartment building could be badly damaged during or after an earthquake? After the first shaking stops, how vulnerable are you to [associated hazards](#), more shaking ([aftershocks](#)), [ground rupture](#) (displacement), [landslides](#), [fires](#), [soil liquefaction](#), [tsunamis](#), or [floods](#)? How would the value of your property be affected? What can you do to protect your investment? Or if you haven't yet invested, what do you need to know to

make a good decision?

OpenHazards seismic forecasting is a new concept in seismic safety. Both the OpenHazards website and personalized reports are designed to help you make critical decisions that affect your life and property.

OpenHazards reports are particularly useful to prospective home-buyers. The reports can help you and your realtor accurately compare seismic risks for several properties. This allows you to choose the safest home possible.

We calculate two figures of merit for this purpose: the *Safety Score* (OHSS), and the *Hazard Discounted Value* (HDV). The Safety Score is an index reflecting a likelihood of damage to personal property or to your structure. The Hazard Discounted Value calculates the home value discounted by the effects of structural damage to the home in an average likely earthquake. By comparing the reports for two homes, you can assess the risk of loss quantitatively. The safety score may also be used to loosely compare risk of injury.

Both owners and renters can benefit from an OpenHazards Seismic Report
